## Time Savings: Live Interview Cloning

Bring additional efficiency to high-volume hiring - and give your candidates more visibility and chances to get hired

**What It Is:** Clone a candidate's recorded live interview when it meets your matching criteria. For example - a retail organization with similar positions at multiple locations, or the same position with different requisitions.

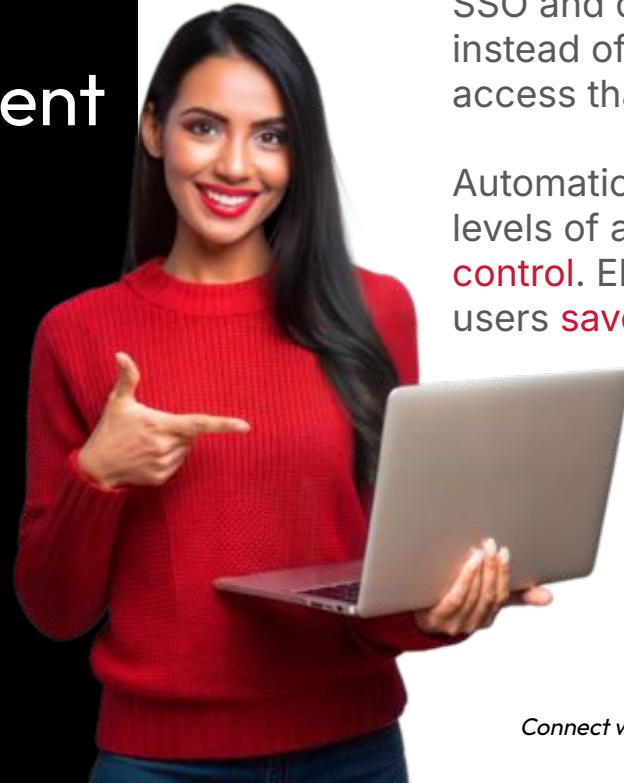

**Good for hiring teams:** Save time by removing any redundancies associated with live interviews - reserving time, scheduling, conducting and reviewing the interview

**Good for candidates:** Candidates can now be considered for multiple roles without multiple interviews! Respect their time and provide a superior candidate experience.

# Leveled Up User Management

## Greater control, security and efficiency

**Now Available:** Leverage auto user creation with SSO and default users to the Hiring Manager role instead of Recruiter, which gives greater levels of access than you may want

Automatically adding users at a role with lower levels of access gives you **greater security and control**. Eliminating the need to manually create users **saves time and drives efficiency**.
